

Summary

Recently graduated engineering student who has built and shipped web projects – one actively used by 500+ users in production. Proficient in Node.js, Express.js, PostgreSQL, Prisma and MongoDB. Looking to bring real-world solutions as a Backend Engineer to various fields.

Skills

Skills: DBMS, Computer Networks, OS, OOP, SQL, DSA and System Design

Backend: JavaScript, Node.js, Express.js, REST APIs, PostgreSQL, Prisma and MongoDB

Tools: VS code/Zed, GitHub Copilot AI (Claude code, Codex), curl/postman, Git, GitHub, Docker, Heroku.

Education

B.E Instrumentation (CGPA of 7.5) Sri Sairam Engineering college

2022 – 2026

Projects

CANSAT GUI A National level competition conducted by IN-Space (ISRO) at UP

[Repo](#) | [Blog](#)

- Designed a real-time GUI to visualize and store received telemetry data from Satellite (Serial port, Socket.io & PostgreSQL).
- Worked closely with other subsystems (Payload & Sensors, Communication & Structure)
- Launched the Satellite to 1000m at launch station in front of ISRO scientists as judges during finals and got Certificate of Excellence from IN-Space (ISRO)

FTTA (Faculty Time Tracking Application) Developed for Private institutions to monitor Faculties and Students

Attendance and Work progress.

[Repo](#) – Currently close source, [Live Application](#)

- Built a web application that let admin tracks their faculties and students attendance and work progress with admin dashboard that only let admin's email to login.
- Deployed using Docker, Vercel and Heroku – currently live and actively used by 500+ users.

IMDF (Image meta-data filter): A REST API Service for storing and filtering images based on meta-data

[Repo](#)

- Built a RESTful APIs to handle image uploads, extract meta-data and wrote the server-side logic to return filtered results based on query parameters.
- Integrated Multer for file handling, file storage in Cloudinary, MongoDB for meta-data persistence, deployed using Docker & Render.

Internship

Web Developer Intern at L&Q Technologies, Bangalore

June 2024 – July 2024

- Clean work track using Git and GitHub in a professional manner.
- Tested and Validated REST API endpoints using Postman, identifying edge cases and participated in discussions of designing scalable systems.

Command and Data Handling Team Lead, STIC (Sairam Techno Incubator Centre) June 2025 – July 2025

- Led the C&DH subsystem of CANSAT competition, recruited members, designated roles and tasks, provided operating guides and materials for consistent and seamless workflow. Conducted discussion meetings to report progress on each task assigned.
- Reported Design decisions, tradeoffs and work progress to Mentors, Sponsors and Overall Team lead. Documented the works for future teams and guiding current new team as well.

Certifications

AWS, Docker, SQL, JavaScript, Node.js, Git
